# Understanding the Best Entry Feature

Designed to protect against early downward index movement.<sup>(1)</sup>

## Here's how it works

For purposes of calculating the index credit amount with Enduris FIA, the starting Index Value will be reduced if the index falls more than 10%\* (the Trigger Rate) during the Best Entry Window period (currently 60 days\* from the policy issue date).

## Key Reference Points

- 1 4119** This is the Initial Starting Index Value
- 2 3707** Best Entry Window (Trigger Rate of 10%)
- 3 3693** New Best Entry Starting Value (first decrease value below the Trigger Rate)
- 4 4589** Ending Index Value

<sup>(1)</sup> The Best Entry Feature applies only to the first Indexed Interest Option crediting period following policy issue. It does not apply to any periods thereafter. It also does not apply to the Fixed Interest Option.

\*The Trigger Rate and Best Entry Window Period stated above is subject to change at any time prior to policy issue. The Trigger Rate and Best Entry Window declared in the Contract will not change. Please contact Revol One Financial for the most up to date terms and conditions.

# Enhanced Participation Rate

The Enhanced Participation Rate (EPAR) Indexed Interest Options provide an opportunity for your clients to capture a greater percentage of growth if the S&P 500® Index performs well during the option term.

## Here's how it works

With an EPAR strategy, there are two participation rates:

- The Initial Participation Rate applies to index growth up to a designated rate (called the Index Term Change Percentage)
- The Enhanced Participation Rate applies to any index growth above the Index Term Change Percentage

### Example\*

If the index increases by 20% in this strategy term, the Index Term Change Percentage is 10%, the initial Participation Rate is 20%, and the Enhanced Participation Rate is 100%, the EPAR interest crediting percentage will be 12%.

$$\left[ \begin{array}{c} 20\% \\ \text{PAR} \end{array} \right] \times \begin{array}{c} 10\% \\ \text{INITIAL GAINS} \end{array} + \left[ \begin{array}{c} 100\% \\ \text{PAR} \end{array} \right] \times \begin{array}{c} 10\% \\ \text{ADDITIONAL GAINS} \end{array} = 12\%$$
